

OEM Design Support – Customization, CTE, Tolerances, Speed

As we proceed to the Design phase, our applications engineers will work with you on prototype development. They are capable of creating custom solutions rapidly, to meet your engineering time line. Often, standard products can be modified quickly to create customized encoders and

gratings that meet your exact performance benchmarks.

Following completion of the design phase and prototyping, the process initiates manufacturing ramp up.

OEM Design Support

- Customization, CTE, Tolerances, Speed
- Rapid Customer Response
- Rapid Prototyping
- Customization Services
- Design for Performance Advisories
- Design for Manufacturing Advisories
- Design for Field Support Advisories
